System Setup

Dell™ Vostro™ 320 Service Manual

- [Overview](#)
- [Entering System Setup](#)
- [System Setup Options](#)

Overview

System Setup is a BIOS utility accessible during POST. This utility allows you to change parameters that affect the BIOS and system configuration. You can use System Setup to:

- 1 Change the system configuration information after you add, change, or remove any hardware in your computer
- 1 Set or change a user-selectable option, such as the user password
- 1 Read the current amount of memory or set the type of hard drive installed

 **CAUTION:** Unless you are an expert computer user, do not change the settings for this program. Certain changes can make your computer work incorrectly.

 **NOTE:** Before you use System Setup, it is recommended that you write down the System Setup screen information for future reference.

Entering System Setup

1. Turn on (or restart) your computer.
2. When the blue DELL™ logo is displayed, watch for the F2 prompt to appear and press <F2> immediately.

 **NOTE:** The F2 prompt indicates that the keyboard has initialized. This prompt can appear very quickly, so you must watch for it to display, and then press <F2>. If you press <F2> before you are prompted, this keystroke will be lost. If you wait too long and the operating system logo appears, continue to wait until you see the Microsoft® Windows® desktop. Then, shut down your computer and try again.

Boot Menu

The boot menu allows you to set a one-time boot sequence without entering System Setup. You can also use this procedure to run the diagnostics on your computer.

To enter System Setup using the Boot Menu:

1. Turn on (or restart) your computer.
2. When the Dell™ logo appears, press <F12> immediately.
3. Highlight the option to enter System Setup and then press <Enter>

 **NOTE:** Making changes in the boot menu does not make any changes to the boot order stored in the System Setup program.

System Setup Options

System Info

 **NOTE:** Use the keyboard to navigate through the System Setup screens.

The System Info page provides the basic configuration information. You cannot change these fields. The following information is available:

System Info	
System Model Info	Displays the system name
BIOS Version	Displays the BIOS version number
Service Tag	Displays the service tag of the computer when the service tag is present
Processor Type	Displays the processor information
Processor L2 Cache	Displays the L2 cache size
Memory Installed	Indicates the amount of memory installed in MB
Memory Speed	Indicates the memory speed in MHz
Memory Channel Mode	Indicates if the memory is in single or dual channel mode
Memory Technology	Indicates the type of installed memory

Main Options

The Main page allows you to update the basic system configuration.

Main Options

Service Tag Setting	Displays the service tag of the computer when the service tag is present
	Displays a field to input the service tag manually when the service tag is absent
System Time	Displays current time in hh:mm:ss format
System Date	Displays the current date in mm/dd/yy format
SATA-0	Displays the SATA drive connected to the SATA-0 connector
SATA-1	Displays the SATA drive connected to the SATA-1 connector
SATA-2	Displays the SATA drive connected to the SATA-2 connector
Halt on Error	Enabled or Disabled (Enabled by default)
Keyboard Errors	Displays keyboard errors when set to Report Default is Report
Fan Errors	Displays fan errors when set to Report Default is Report

Advanced Settings

 **WARNING:** Setting the wrong values in one of the Advanced Settings may cause your computer to work incorrectly.

Advanced Settings	
CPU Information	<ul style="list-style-type: none"> 1 Max CPUID Value Limit—Enabled or Disabled (Disabled by default) 1 Execute-Disable Bit Capability—Enabled or Disabled (Enabled by default)
Integrated Graphics Configuration	<ul style="list-style-type: none"> 1 Initiate Graphic Adapter—PEG/PCI 1 Video Memory Size—32 MB 1 DVMt Mode Select—DVMt Mode 1 DVMt/FIXED Memory—256 MB
Integrated Peripherals Configuration	<ul style="list-style-type: none"> 1 ATA/IDE configuration—Disabled; Compatible; Enhanced (Enhanced by default) 1 USB Functions—Enabled or Disabled (Enabled by default) 1 USB Storage Function—Enabled or Disabled (Enabled by default) 1 Audio Controller—Enabled or Disabled (Enabled by default) 1 Wireless LAN—Enabled or Disabled (Enabled by default) 1 Integrated NIC—Enabled or Disabled (Enabled by default) 1 LAN Boot ROM—Enabled or Disabled (Disabled by default) 1 1394/Card Reader—Enabled or Disabled (Enabled by default) 1 Onboard Serial Port—3F8/IRQ4 1 Onboard Parallel Port—378/IRQ7 1 Parallel Port Mode—SPP
Bootup Num-Lock	Selects Power-on state for Numlock. On or Off (On by default)
Quick Boot	Allows BIOS to skip certain tests while booting. This will decrease the time needed to boot the system. Enabled or Disabled (Enabled by default)
High Performance Event Timer	Enabled or Disabled
HDD Protection Feature	Enabled or Disabled. If Enabled, it is intended to keep the data in the protected partition secure and unchangeable, PXE will be enabled automatically

Power Management

Power Management Options	
Suspend mode	Select the ACPI state used to suspend the computer. Default is S3
USB Wakeup From S3	Enabled or Disabled (Enabled by default)
Restore on AC Power Loss	Restores the computer back to either one of the three following options should there be any power failure / interruption: Off, On, or Last (Off by default)
Low Power Mode	Enabled or Disabled (Disabled by default)
Resume On LAN	Enabled or Disabled to generate a wake event (Disabled by default)
Resume On RTC Alarm	Enabled or Disabled RTC to generate a wake event (Disabled by default)

Security Options

Security Options	
Unlock Setup Status	Unlocked
Supervisor Password	Status of supervisor password installed
User Password	Status of user password installed
Change Supervisor Password	Allows to set the desired supervisor password
Change User Password	Allows to set the desired user password
Boot Menu Security	Enabled or Disabled (Disabled by default)

Your computer provides two password features in System Setup to help you secure you computer:

- 1 Supervisor Password

Supervisor Password

The Supervisor Password is the highest level password present on the computer. When the supervisor password has been set, it must be entered to access computer Setup. It also can be used to boot the computer if a User Password has been set.

Once set you will be prompted for a password when you enter system setup. Passwords can be up to eight characters long.

 **NOTE:** If an incorrect password was used, you can still view the settings in System Setup. You will not be able to change any settings until a correct password has been entered.

 **NOTE:** The supervisor password is a systems level password. Do not confuse this password with any operating system account password. If an account password is enabled in the operating system users and administrators must enter the operating system account password to gain access to the operating system.

If the supervisor password has been forgotten or lost, the password can only be removed using the CMOS jumper on the system board. More information on the use of the CMOS jumper can be found in the system board jumpers page. Using this jumper will also clear the user password.

Enabling Supervisor Password

1. Enter System Setup.
2. Highlight **Change Supervisor Password** and press <Enter>.
3. Enter a password at the prompt and press <Enter>.
4. Enter the password again to confirm and press <Enter>.

User Password

The User Password is for users who only need to boot to a operating system on the computer. It does not allow access to System Setup. When the user password has been set, it must be entered in order to boot to an operating system.

Once set you will be prompted for a password when the system is booting as illustrated above. Passwords can be up to eight characters long. Once a correct password has been entered the system will continue to boot.

 **NOTE:** The user password is a systems level password. Do not confuse this password with any operating system account password. If an account password is enabled in the operating system users and administrators must enter the operating system account password to gain access to the operating system.

Enabling the User Password

 **NOTE:** The User Password is not visible or accessible on the System Setup menu until a Supervisor Password has been set.

1. Set a supervisor password if one has not been set. If no supervisor password is set on the system then the user password option will be gray and unavailable.
2. Highlight **Change User Password** and press <Enter>.
3. Enter a password in the prompt and press <Enter>.
4. You will be prompted to confirm the password. Enter the password in the prompt and press <Enter>.

Boot

Boot Options	
1st Boot Device	Specifies the first boot device from a sequence of available devices Removable; SATA; USB; CD/DVD; Network; Disabled (Removable by default) NOTE: If the first boot device is not available, the system will proceed to look for the second and following devices automatically.
2nd Boot Device	Specifies the second boot device from a sequence of available devices. Removable; SATA; USB; CD/DVD; Network; Disabled (SATA by default)
3rd Boot Device	Specifies the third boot device from a sequence of available devices. Removable; SATA; USB; CD/DVD; Network; Disabled (USB by default)
4th Boot Device	Specifies the fourth boot device from a sequence of available devices. Removable; SATA; USB; CD/DVD; Network; Disabled (CD/DVD by default)
5th Boot Device	Specifies the fifth boot device from a sequence of available devices. Removable; SATA; USB; CD/DVD; Network; Disabled (Network by default)
Removable Drives	Specifies the boot device priority sequence from the available removable drives.
Hard Disk Drives	Specifies the boot device priority sequence from the available hard disk drives.
USB Drives	Specifies the boot device priority sequence from the available USB drives.
CD/DVD Drives	Specifies the boot device priority sequence from the available CD/DVD drives.
Network Drives	Specifies the boot device priority sequence from the available network drives.

Diagnostics

Dell™ Vostro™ 320 Service Manual

- [Power Button Light](#)
- [Beep Codes](#)
- [System Messages](#)
- [Dell Diagnostics](#)
- [Starting Dell Diagnostics](#)
- [Using Dell Diagnostics](#)

Power Button Light

The power light blinks or remains solid to indicate five different states:

- 1 **No light** — The computer is in the off state: Hibernate mode; or is not receiving power.
- 1 **Solid Amber** — The system board cannot start initialization. There may be a problem with either the system board or power supply.
- 1 **Blinking Amber** — The computer has detected an error during POST. The light will flash along with the three BIOS beep codes to indicate the error.
- 1 **Blinking White** — The computer is in sleep state. Press a key on the keyboard, move the mouse, or press the power button to resume to normal operation.
- 1 **Solid White** — The computer is fully functional and is in S0 (ON) state

Beep Codes

Your computer may emit a series of beeps during start-up if the monitor cannot display errors or problems. The following repetitive beep codes can help you troubleshoot problems with your computer.

System Beep Codes	
Beep Code	Description
one beep	possible motherboard failure - BIOS ROM checksum failure
two beeps	no RAM detected
three beeps	possible motherboard failure - Chipset error
four beeps	RAM read/write failure
five beeps	real time clock failure
six beeps	video card or chip failure
seven beeps	processor failure
eight beeps	display failure

System Messages

If your computer has a problem, it may display a system message that will help you identify the cause and action needed to resolve the issue.

 **NOTE:** If the message received is not listed in the following examples, see the documentation for either the operating system or for the program that was running when the message appeared.

System Messages	
System Message	Description
Alert! Previous attempts at booting this system have failed at checkpoint [nnnn]. For help in resolving this problem, please note this checkpoint and contact Dell Technical Support	The computer failed to complete the boot routine three consecutive times for the same error
CMOS checksum error	Possible system board failure or RTC battery low
CPU fan failure	Possible CPU fan failure
Hard-disk drive failure	Possible hard drive failure during POST
Hard-disk drive read failure	Possible hard drive failure during hard drive boot test
Keyboard failure	Keyboard failure or loose cable. If reseating the cable does not solve the problem, replace the keyboard
No boot device available	<p>No bootable partition on hard drive, the hard drive cable is loose, or no bootable device exists.</p> <ul style="list-style-type: none">1 If the hard drive is your boot device, ensure that the cables are connected and that the drive is installed properly and partitioned as a boot device1 Enter system setup and ensure that the boot • sequence

	information is correct
No timer tick interrupt	A chip on the system board might be malfunctioning or motherboard failure
USB over current error	Disconnect the USB device. The USB device needs more power for it to function properly. Use an external power source to connect the USB device, or if the device has two USB cables, connect both of them
CAUTION - Hard Drive SELF MONITORING SYSTEM has reported that a parameter has exceeded its normal operating range. Dell recommends that you back up your data regularly. A parameter out of range may or may not indicate a potential hard drive problem	S.M.A.R.T error, possible hard drive failure

Dell Diagnostics

The Dell™ Diagnostics utility is a hardware diagnostic program placed in the utility partition on the hard drive. The diagnostic utility is also available on the Dell ResourceCD.

- 1 **Express Test** — Performs a quick test of devices. This test typically takes 10 to 20 minutes and requires no interaction on your part. Run Express Test first to increase the possibility of tracing the problem quickly.
- 1 **Extended Test** — Performs a thorough check of devices. This test typically takes an hour or more and requires you to answer questions periodically.
- 1 **Custom Test** — Tests a specific device. You can customize the tests you want to run.
- 1 **Symptom Tree** — Lists the most common symptoms encountered and allows you to select a test based on the symptom of the problem you are having.

Starting Dell Diagnostics

1. Turn on (or restart) the computer.
2. When the Dell logo appears, press <F12> immediately.
If you wait too long and the operating system logo appears, continue to wait until you see the Microsoft® Windows® desktop, and then shut down the computer and try again.
3. When the boot device list appears, highlight **Boot to Utility Partition** and press <Enter>.
4. When the Dell Diagnostics main menu appears, select the test you want to run.

Using Dell Diagnostics

 **NOTE:** The Service Tag for the computer is located at the top of each test screen. If you contact Dell, Dell Technical Support will ask you for your computer's Service Tag.

1. After the Dell Diagnostics program loads and the main menu screen appears, click the button for the option you want.
2. If the diagnostics encounters a problem during a test, a message appears with an error code and a description of the problem. Write down the error code and problem description and follow the instructions on the screen. If you cannot resolve the error condition, contact Dell.
3. If you run a test from the **Custom Test** or **Symptom Tree** option, click the applicable tab described in the following table for more information.

Tab	Function
Results	Displays the results of the test and any error conditions encountered.
Errors	Displays error conditions encountered, error codes, and the problem description.
Help	Describes the test and may indicate requirements for running the test.
Configuration	Displays the hardware configuration for the selected device. Dell Diagnostics obtains configuration information for all devices from System Setup, memory, and various internal tests, and it displays the information in the device list in the left pane of the screen. The device list may not display the names of all the components installed on the computer or all devices attached to the computer.
Parameters	Allows you to customize the test by changing the test settings.

4. Close the test screen to return to the main menu screen. To exit Dell Diagnostics and restart the computer, close the main menu screen.

 **NOTE:** Refer to the Dell Diagnostics (GUI) techsheet for more information.

Dell HTML Functional Test Report

Version 14

Last Revised Date: August 2006

Overview

Scope

Testing includes:

- 1 Verifying that the HTML files display and function correctly under Internet Explorer.
- 1 Verifying the HTML requirements documented in the Test Case.

Testing does **not** include:

- 1 Proofing the document's text for grammar, spelling, readability, word usage, technical accuracy, etc.
- 1 Making discretionary changes to the html code in order to improve the appearance of the code (for example, adding or trimming white space, or indenting table rows and list items).
- 1 Correcting code validation errors that are not affecting the display or functionality of the document (for example, inconsequential nesting errors).

Quality Goals

To achieve zero functional defects and to display high-quality HTML.

Test Matrix

Any computer system can be used to complete the testing.

Issue Reporting

All issues should be logged on the report. Statements should include specific descriptions for each issue including the filename and the line number in the html code where the error is found. (Use the "Show line numbers" button in Homesite to identify line numbers.) .

Contact

If you have questions about this test report, contact MaryLee_Grant@ dell.com, Dell Information Development.

Test Document Information

Document title as it appears in the document:	Dell Vostro 320 Service Manual
Point of contact:	pb
Alternate Point of contact:	pb
Tested by (name):	pb
Date and Time tested:	9/25/2009 9:22:36 AM
Tested Path:	S:\Biz_Client_SMs\West_Lake\SM
Browser on which tested:	Internet Explorer

Test Case

No.	Test Case Description	Pass	Fail	Comments
1.	Verify that the contents page is named index.htm	X		
2.	Verify that the contents page is in the specified language	X		
3.	Verify that each HTML file contains the appropriate character set meta tag in the <head> </head> section. NOTE: The first meta tag in each group is the default tag. Only one character set meta is needed. Do not put multiple character set meta tags in files. Arabic <META HTTP-EQUIV="Content-Type" content="text/html; charset=iso-8859-6"> Danish, Dutch, English, Finnish, French, German, Italian, Norwegian, Portuguese, Spanish, Swedish <META HTTP-EQUIV="Content-Type" content="text/html; charset=iso-8859-1"> Greek <META HTTP-EQUIV="Content-Type" content="text/html; charset=windows-1253"> Hebrew <META HTTP-EQUIV="Content-Type" content="text/html; charset=iso-8859-8-I"> <META HTTP-EQUIV="Content-Type" content="text/html; charset=windows-1255">	X		

	Japanese <META HTTP-EQUIV="Content-Type" content="text/html; charset=shift_jis"> <META HTTP-EQUIV="Content-Type" content="text/html; charset=shift-sjis"> <META HTTP-EQUIV="Content-Type" content="text/html; charset=x-sjis"> Korean <META HTTP-EQUIV="Content-Type" content="text/html; charset=ks_c_5601-1987"> <META HTTP-EQUIV="Content-type" content="text/html; charset=EUC-KR"> <META HTTP-EQUIV="Content-type" content="text/html; charset=iso-2022-kr"> Polish, Czech, Hungarian, Slovakian, Slovenian <META HTTP-EQUIV="Content-Type" content="text/html; charset=windows-1250"> Russian <META HTTP-EQUIV="Content-Type" content="text/html; charset=windows-1251"> S Chinese <META HTTP-EQUIV="Content-Type" content="text/html; charset=gb2312"> <META HTTP-EQUIV="Content-Type" content="text/html; charset=gb_2312-80"> T Chinese <META HTTP-EQUIV="Content-Type" content="text/html; charset=Big5"> Thai <META HTTP-EQUIV="Content-Type" content="text/html; charset=windows-874"> Turkish <META HTTP-EQUIV="Content-Type" content="text/html; charset=iso-8859-9">			
4.	For all files, ensure that the following HTML tag appears somewhere between the <doctype...> and the <html> tag near the top of the file: <!-- #include VIRTUAL="/includes/global_format.inc.asp" --> For all files, ensure that the following HTML tags appear immediately after the <body bgcolor="#ffffff"> tag near the top of the file: <!-- #include VIRTUAL="/includes/global_header.inc.asp" --> <!-- @@@ --> For all files, ensure that the following HTML tags appear immediately before the </body> tag near the bottom of the file: <!-- @@@ --> <!-- #include VIRTUAL="/includes/global_footer.inc.asp" -->	X		
5.	Verify that file and folder names comply with 8.3 naming conventions. The file name may not exceed 8 characters with a 3-character extension (.htm or .gif). Ensure that all file names including the extensions are lowercase. 8.3 naming conventions do not apply to .txt files.		X	See Results
6.	Verify that the anchor tags (bookmarks) are relative and do not contain spaces, slashes, colons, questions marks, or extended characters such as @. Anchor names that contain two or more words should be shortened to one word (that makes sense), abbreviated, or separated by underscores.	X		
7.	Verify that the and tags are lowercase.	X		
8.	Using a professional quality link and tag checker, verify that each HTML file meets the following:			
8a.	There are no broken links		X	See Results
8b.	Links to other files are relative and not hard-coded	X		
9.	Manually check all links in Internet Explorer.	X		
10.	Verify that each HTML file does not contain any link color tags such as vlink= or link=, or link color=	X		
11.	Verify that each HTML file contains the correct body tag (<body bgcolor="#FFFFFF">).	X		
12.	Verify that each HTML file (page) is displayed properly in each of the required browsers (correct formatting in one browser may be incorrect in another.). Specify the resolution(s) tested in the comments column.	X		1680 x 1050
13.	Ensure that each page is in the correct language.	X		
14.	If the document will be scripted at the factory, verify that a title.txt file is part of the directory, and is in the correct language (the title.txt file is not needed for docs that are Web posted only, such as Service Manuals). The text string should not be longer than 40 characters, and should not contain ™, ®, "\", or "/".	X		

Results:

System Information	
System chipset	Intel® G41 + ICH7

Processor	
Processor type	Intel Celeron®, Intel Pentium®, Intel Core™2 Duo, or Intel Core 2 Quad 65W TDP

Memory	
Memory type	DDR2 800 MHz
Memory connectors (slots)	two DIMM slots
Memory capacities	1 GB or 2 GB
Minimum memory	1 GB
Maximum memory	4 GB dual channel

Audio	
Audio type	Conexant Pebble High Definition SmartAudio integrated audio

Control Lights and Diagnostic Lights	
Power light	<ul style="list-style-type: none">1 white light — solid white light indicates power-on state; blinking white light indicates standby power state of the computer.1 amber light — solid amber light indicates a problem with the system board or power supply; blinking amber light indicates a problem with the system board.
Drive activity light	<p>Displays the SATA hard drive or CD/DVD activity.</p> <ul style="list-style-type: none">1 white light — blinking white light indicates that the computer is reading data from or writing data to the hard drive.1 green light — blinking green light indicates that the computer is reading data from or writing data to the optical drive.
Camera status light	<ul style="list-style-type: none">1 white light — solid white light indicates that the camera is turned on.

Drives	
Externally accessible	one 5.25-inch drive bay
Internally accessible	one 3.5-inch SATA drive bay

Available devices	one 3.5-inch SATA hard drive one 5.25-inch SATA DVD-ROM, DVD+/-RW
-------------------	--

Connectors	
Extrnal connectors	
Network Adapter	RJ-45 connector
USB	USB 2.0 compliant, support 2.0 A sustained charge to power external USB devices: Three at the right side Three at the back
Audio	One line-out at the back Two right hand side panel connectors for headphones and microphone
Serial	One 9-pin connector at the back
PS/2	Two 6-pin mini-DIN connector
IEEE 1394a	One right hand side panel 6-pin connector (optional)
Printer Port (Parallel)	One 25-hole connector at back

Power	
DC power supply:	
Wattage	130W
Maximum heat dissipation (MHD)	497.8 BTU/hr
Voltage	100-240 V~, 50/60 Hz, 2-1 A
Coin-cell battery	3-V CR2032 lithium coin cell

Physical	
Height	386.39 mm (15.21 inches)
Width	477.39 mm (18.79 inches)
Depth	103.98 mm (4.09 inches)
Weight	6.5 – 8.0 Kgs (14.3 – 17.6 lbs) (varies with different LCD panels and configurations)

Video	
Display sizes	17 inches wide (resolution 1440 x 900) 18.5 inches wide (resolution 1366 x 768) 19 inches wide (resolution 1440 x 900)
Type	integrated graphics
Data bus	low-voltage differential signaling (LVDS)
Video controller	Intel GMA X4500
Video memory	1 MB-256 MB

Environmental	
Temperature range:	
Operating	10° to 35°C (32° to 95°F)
Storage	-40° to 65°C (-40° to 149°F)
Relative humidity:	
Operating	10% to 90% (non-condensing)
Storage	5% to 95% (non-condensing)
Altitude:	
Operating	-15.2 to 3048 m (-50 to 10,000 ft)
Storage	-15.2 to 10,668 m (-50 to 35,000 ft)
Airborne contaminant level	G2 or lower as defined by ISA-S71.04-1985

Before Working Inside Your Computer

Use the following safety guidelines to help protect your computer from potential damage and to help to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that the following conditions exist:

- 1 You have performed the steps in [Working on Your Computer](#).
- 1 You have read the safety information that shipped with your computer.
- 1 A component can be replaced or—if purchased separately—installed by performing the removal procedure in reverse order.

 **WARNING:** Before working inside your computer, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at www.dell.com/regulatory_compliance.

 **CAUTION:** Only a certified service technician should perform repairs on your computer. Damage due to servicing that is not authorized by Dell is not covered by your warranty.

 **CAUTION:** To avoid electrostatic discharge, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface, such as a connector on the back of the computer.

 **CAUTION:** Handle components and cards with care. Do not touch the components or contacts on a card. Hold a card by its edges or by its metal mounting bracket. Hold a component such as a processor by its edges, not by its pins.

 **CAUTION:** When you disconnect a cable, pull on its connector or on its pull-tab, not on the cable itself. Some cables have connectors with locking tabs; if you are disconnecting this type of cable, press in on the locking tabs before you disconnect the cable. As you pull connectors apart, keep them evenly aligned to avoid bending any connector pins. Also, before you connect a cable, ensure that both connectors are correctly oriented and aligned.

 **NOTE:** The color of your computer and certain components may appear differently than shown in this document.

To avoid damaging your computer, perform the following steps before you begin working inside the computer.

1. Ensure that your work surface is flat and clean to prevent the computer cover from being scratched.
2. Turn off your computer (see [Turning Off Your Computer](#)).

 **CAUTION:** To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

3. Disconnect all network cables from the computer.
4. Disconnect your computer and all attached devices from their electrical outlets.
5. Press and hold the power button while the computer is unplugged to ground the system board.
6. Remove the back cover of the computer (see [Back Cover](#)).

 **CAUTION:** Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity, which could harm internal components.

Recommended Tools

The procedures in this document may require the following tools:

- 1 Small flat-blade screwdriver
- 1 Phillips screwdriver
- 1 Small plastic scribe
- 1 Flash BIOS update program CD (see the Dell Support website at support.dell.com)

Turning Off Your Computer

 **CAUTION:** To avoid losing data, save and close all open files and exit all open programs before you turn off your computer.

1. Shut down the operating system:

In Windows Vista:

Click **Start** , then click the arrow in the lower-right corner of the **Start** menu as shown below, and then click **Shut Down**.

In Windows XP:

Click **Start→ Turn Off Computer→ Turn Off**.

The computer turns off after the operating system shutdown process is complete.

2. Ensure that the computer and all attached devices are turned off. If your computer and attached devices did not automatically turn off when you shut down your operating system, press and hold the power button for about 6 seconds to turn them off.

After Working Inside Your Computer

After you complete any replacement procedure, ensure you connect any external devices, cards, and cables before turning on your computer.

1. Replace the back cover of the computer (see [Back Cover](#)).
2. Connect any telephone or network cables to your computer.

 **CAUTION:** To connect a network cable, first plug the cable into the network device and then plug it into the computer.

3. Connect your computer and all attached devices to their electrical outlets.
4. Turn on your computer.
5. Verify that the computer works correctly by running the Dell Diagnostics. See [Dell Diagnostics](#).
